Safe Rides
Better Tomorrow
Smart Safety System
for Two-Wheelers
Detect → Warn → Prevent
A short, simple intro showing a college student riding a bike.

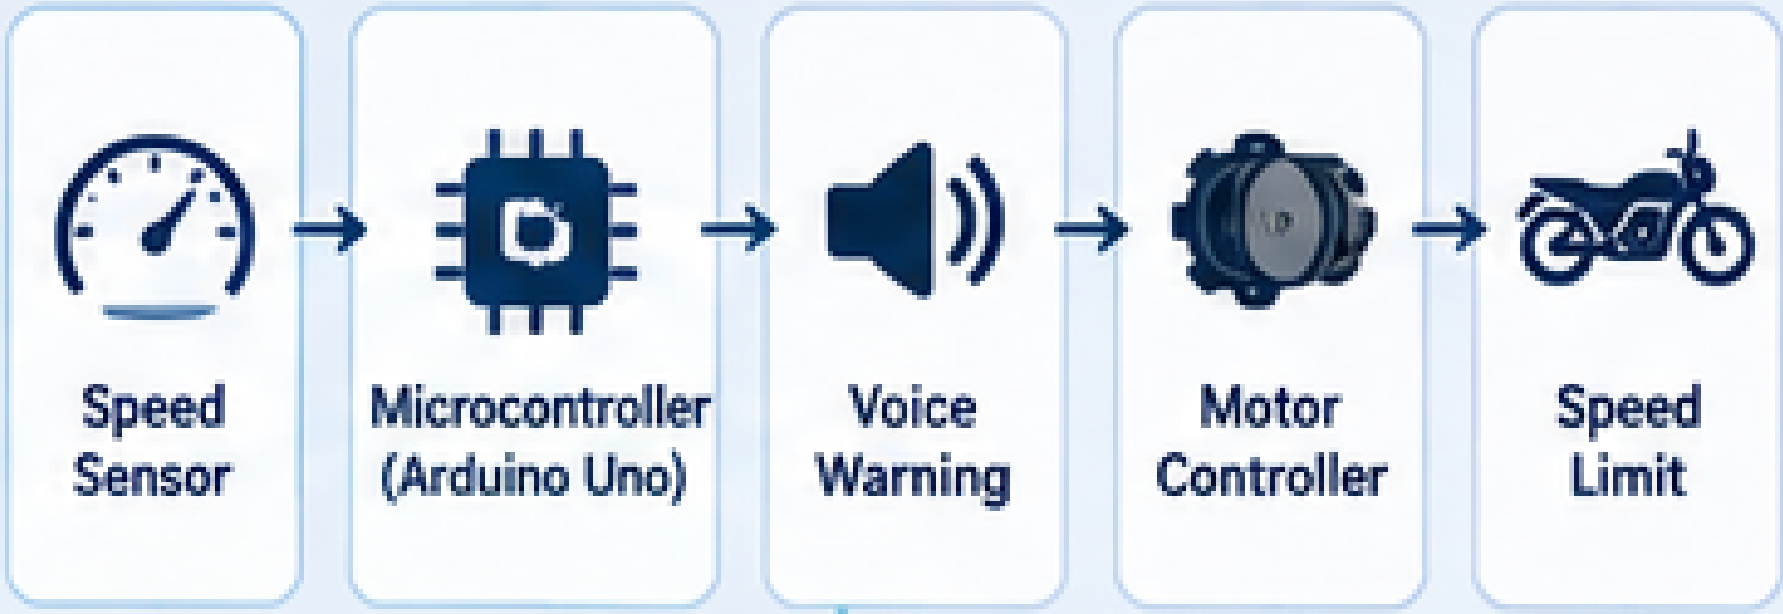

Show the bike with labelled components (or a clear model).

Close-up shots of the components with simple labels and

00:29 – 00:40

How It Worlks?

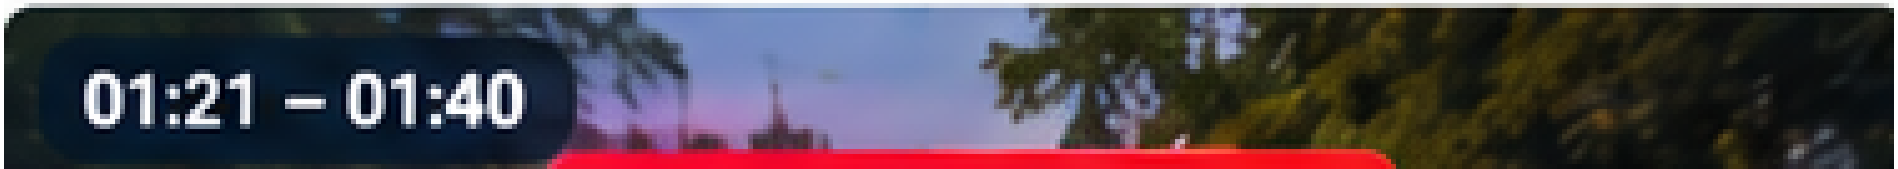

If overspeed is repeated → Controlled speed limiting (40 – 50 km/h)

Animated flowchart explaining the working process.

1. Normal Mode (≤ 60 km/h)

Bike runs normally. No warning.

2. First Warning

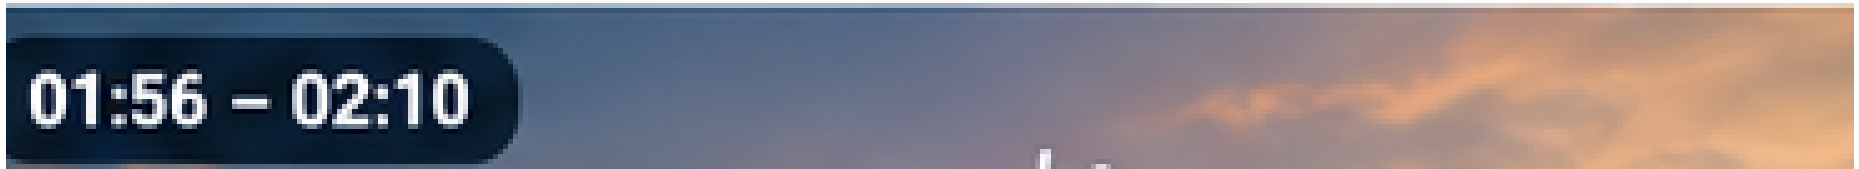

Voice warning for first overspeed.

01:41 – 01:55

3. Second Warning

Stronger voice warning.

4. Third Warning

Continuous warning.

02:11 – 02:15

5. Controlled Speed Limiting

After repeated violations, the system gradually reduces acceleration and limits the speed to 40–50 km/h.

Future Scope

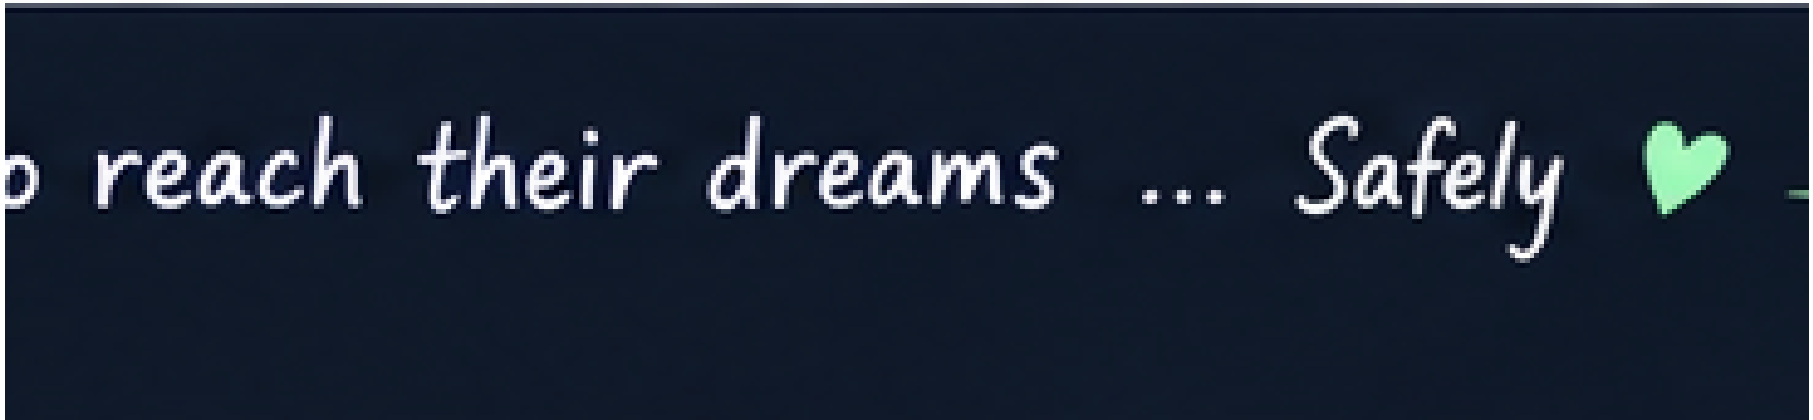

- Real vehicle integration
- GPS-based dynamic speed limits
- Mobile app alert
- AI-based behavior analysis
- Can be extended to cars & other vehicles
